

# NO SAFETY BARRIERS - COMPLEX series -

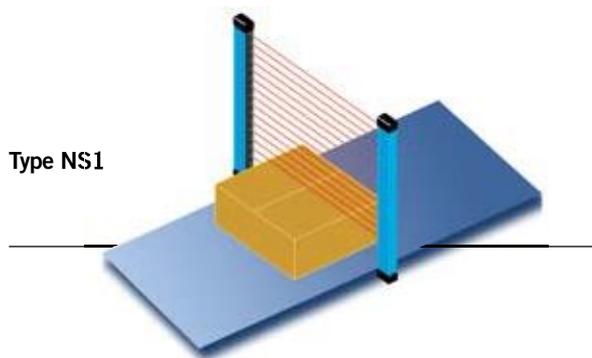

## NS - NI series

For automation - control - measure and counting

## ■ Photoelectric barriers to detect area

The system formed by an emitter and receiver, produces a grid of parallel beams to detect the presence of object giving the signal related to the form and dimensions of the object. The heights detected are between 100 and 2000 mm with a range of 0.6 - 15 - 30 m.

Type NS1

### Applications

- Control of body or vehicle on automatic door
- Control of obstacle on automatic parking or lift
- Measure of packing dimensions
- Automation in general

### Features

- **Power supply** 24Vdc +/- 20%
- **Rating consumption** max. 300 mA
- **Output system** 2 x PNP  
4 - 20 mA  
0 - 10 Volt  
485/232 OPEN-ASCII-MODBus
- **Speed of communication data** standard 19.2 KBit /  
optional from 9,2 to 57,6 KBit

**N.B.**  
on the basis of the requirements of EN 61.496-1/2 the units series NS cannot be used in safety application

### NS versions

#### Type NS-1

gives the presence of an object , It is a standard curtain with solid state output 100 mA.

The models A-B-C-D-E-F offer different solution on the basis of range and resolution of the system.

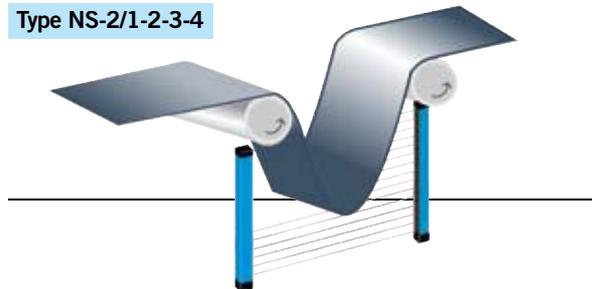

#### Type NS-2/1-2-3-4

gives the form and the dimensions of object. The output signals are RS-232, RS-485 analogic 0-10 Volt or 4 – 20 mA The signals are on, as the beams are detected.

The models A-B-C-D-E-F offer different solution on the basis of range and resolution of the system.

All the electronic circuit are contained inside the two optic enclosures.

#### Type NS-2/1-2-3-4

- Enclosure rating** IP 65
- Frontal protection standard** on plexiglass on request on glass.
- LED indication for different functions**  
Yellow led on TX for power supply  
Red/green leds on RX for free / interrupted barrier
- Output current PNP** max. 100mA protected against short circuit

### Example of application

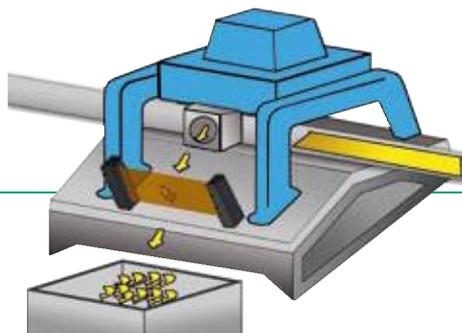

# NO SAFETY BARRIERS - COMPLEX series -

## ■ Applications

### Barriers NI series

To control the process of expulsion pieces on the presses. This series of units are adapted to check small object with diameter less than 1 mm. The checking of rectangular objects is extremely effective, as it is possible to detect thin sheets with thickness of 0.1 mm. The curtain generates a dense beam that scans the item.

The interruption of only one beam, generates the OFF of the curtain.

The high speed of detection and the low resolution of the system, are ideal for the following applications:

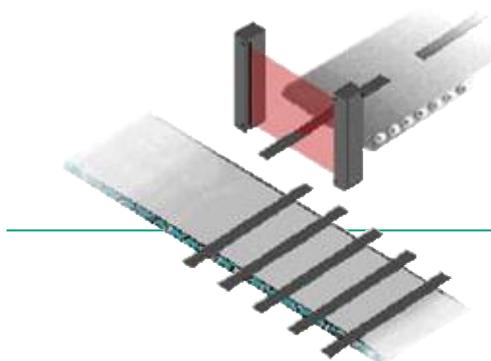

## ■ Applications

- Checking expulsion pieces from presses
- Counting of pieces on production line
- Control of presence of material on painting plant or on rolling machine etc.

## Features

<b>Type NI-1 with resolution 0,9 mm</b> Sensitive high protected 75- 315 mm Range 50 – 300 mm Response time 1,2 msec.	NI-01
<b>Type NI-2 with resolution 2mm</b> Sensitive high protected 75- 315 mm Range 100 – 2.500 mm Response time 0,8 msec.	NI-02
<b>Type NI-4 with resolution 4mm</b> Sensitive high protected 75 – 475 mm Range 100 – 2.500 mm Response time 0,6 msec.	NI-04
<b>Type NI-8 with resolution 8mm</b> Sensitive high protected 75 – 475 mm Range 100 – 2.500 mm Response time 0,4 msec.	NI-08
<b>Standard range</b>	0
<b>Long range</b>	1
<b>Without timer</b>	0
<b>With timer</b>	1
<b>Connector type C</b>	0
<b>Connector type M12</b>	1

	Standard range	Long range
Max power consumption	120 mA	150mA
Light immunity	> 80.000 LUX	> 50.000 LUX
Flash immunity	total up to 200Hz	total up to 100Hz
Power supply	24 Vcc +/- 10%	
Output	NPN / PNP 100 mA	
Speed reading	> 100 part/sec	
Reset time	standard 20 msec from 3 msec to 1sec timing version
